

GENDER AFFIRMING CARE ECHO

The goal of Project ECHO is to increase health care capacity by democratizing knowledge and to strengthen the capacity among primary care providers.

The purpose of the Gender Affirming Care ECHO series will be to support providers with gender-affirming care by connecting healthcare and public health professionals with a multidisciplinary team of subject matter experts in the field. Participants will bring patient cases from their practices for whom they have questions about providing gender-affirming care such as initiation and maintenance of hormone therapy, mental health support, preventive care, sexual health and post-operative care.
